With regard to the addition of local traffic and weather to XM, I have two points I would like to share. First, I commute 4.5 hrs each way every week. It is very nice to be able to find out about the traffic and weather in the cities I'm traveling through before I get there. It allows me to make other plans if necessary. Two, I'm paying for this service. It's not free to anyone and I am unwilling to give this up so that the NAB can "protect its turf". Since when is traffic and weather not a public service? It's not copyrighted. NAB, go away.
